

Pages To Do

User List Page

It is the page where users will be listed with FlatList. User's name and surname field will be in the list.

API end point: <https://jsonplaceholder.typicode.com/users>

User Detail Page

It is the page that will open when the user clicks on any user line from the list above. The id will come from the list on this detail page, and according to the incoming id, a request will be sent to the API and the user's detail information will be retrieved.

API end point: <https://jsonplaceholder.typicode.com/users/5>

Post List Page

This is the page where the posts will be listed. Only the first **20 posts** will be listed on this page. It is sufficient for the **title** field of the posts to appear.

API end point: <https://jsonplaceholder.typicode.com/posts>

Post Detail Page

It is the page that will open when any post line from the above list is clicked. The id will come from the list on this detail page, and according to the incoming id, a request will be sent to the API and the post's detail information will be retrieved.

API end point: <https://jsonplaceholder.typicode.com/posts/5>

- The project will be shared on github.
- A simple design will be made with flex on at least one page.
- There must be at least 5 commits at different times during the project development phase.
- The project can be developed in the expo environment, on the browser (<https://snack.expo.dev/>) or over the react native cli.
